Giant Fig tree

Art. Nr. G4E_00167

- Start unpacking the pallet and put down all separate branches and the main trunk.
- Start with mounting the top trunk (all branches are numbered and should match the holes in the trunk) on the main stem.
- Fixate the branch with the included screw. Then add the side branches in the same way, working your way down the main stem.
- A special wood glue is added (please use enclosed rubber gloves).
- The wood glue works best when a drop of water is added so that you can gently apply the wood to cover up the transition between the main trunk and the added side branches.
- After the wood glue has dried, the same color will appear as the main trunk.
- If you have any questions, you can always contact service@green4ever.shop
